Please Read Before Using the Drill

- Set the rate of drop on your tractor's hydraulics so that you do not damage the drill (new drill = roughly \$40,000).
- Set your tractor's hydraulic speed in the slow position.
- Remember to engage the drive lockout hub when ready to plant and after hooking up hydraulics and mating to the tractor. When planting is completed, remember to disengage the lockout before transporting the drill.
- Never put grass seed in the drill and transport. The seed will pack, not drill properly and may cause damage to the drill. Add seed to the seed boxes in the field when ready to plant.
- **Drills must be lifted for turning.** No sharp corners or braking for turns with drill in the ground. Turning with the drill in the ground will bend the parallel arms.
- Planting speed should be controlled by ground conditions or kept between 1.5 and 5.0 miles per hour.
- Do not exceed 30 mph travel speed when drill is in tow. Drill tires are not rated for speeds in excess of 30 mph.
- We recommend that you check with your insurance agent regarding insurance coverage on rented equipment.
